

## Mothproofing Treatment

**All carpets manufactured by LUSOTUFO containing wool are protected by a durable anti-moth treatment, scientifically tested and totally safe for the environment and human health.**

**This treatment alters the wool protein, keratin, that the moths feed on and makes it impossible to digest so these insects cannot feed or reproduce.**

### MAINTENANCE & CLEANING ADVICE

Mothproofing treatment is long lasting, but regardless of whether carpets or rugs with wool are protected against moth proliferation, they require maintenance and cleaning care to ensure the preservation of the properties of the articles and extend their useful life.

Insects like darkness, humidity and dust, where they most easily proliferate and multiply. As this treatment is not everlasting, it is important that you keep the spaces well-ventilated, vacuum every corner of the carpets and rugs and let in natural light.

When it comes to vacuuming rugs it is advisable to turn them over and also vacuum the back, as this simple cleaning process will help to prevent the spread of moths or other insects.

For more thorough cleaning of the entire surface of the carpet or rug, it is highly recommended to contact a professional every two years.
